## Yahoo all emails

By Allen Bethea While Internet technology and services have evolved rapidly over the years, simple email is still a quick, easy and effective way to share information with others. For example, if you have a Yahoo account, you can share an interesting video with friends or colleagues online or discovered by adding an email. You can send a video up to 25 MB as an e-mail attachment, or send it to a web link or URL when it is posted to the website. Sign in to your Yahoo! Mail account. To create a new message, select The New button. Type or paste the web link for the video that you want to share in the body of your e-mail message. The video URL is included when you send the rest of the message. Sign in to your Yahoo! Mail account. To create a new message, select The New button. Click Attach Files. To start the system file manager, click the first button Select File. Select the video file you want to add, and then click Open. You can send multiple videos at once, but the total size of your video files is limited to 25 MB. Click Attach Files. The video file is embedded in your message when you send it. You've received a friendly e-mail message in your Yahoo! Mail field, and now you want to send a reply to the sender. Nothing can be easier- if you know how to do it. To open a message, select it in your Inbox. Press R. Alternatively, you can select Reply on the Yahoo! Mail toolbar (left arrow). Or, select Reply All (double arrow to the left) next to Reply so that your reply will be addressed to all recipients of the original messages except you. If you're using it, make sure your response is relevant to all recipients. Compose the message and select Send. To send a reply to an email message in Yahoo! Mail Classics: Open the message by selecting it in your inbox. (To open an email from Yahoo! Mail Classic, click on this topic.) Now select Reply (one arrow left) in the upper left corner of the main pane. Alternatively, you can also reply to all (double left arrow) or Forward (right arrow) in your email reply. Add or remove additional recipients in the To, Cc, or Bcc boxes, and then start composing the reply. If you find the original message quoted in the reply, make sure that you quote correctly. When you're done editing, select Send to submit the reply. If you don't like how Yahoo! Mail puts quoted text before replies or forwards, you can quickly turn it off by doing the following: Open the email you want to reply to. Select Reply, Reply All, or Forward. In the body of the e-mail message, select Hide original message. You should see Show original message. You can now create your own answer. Your main yahoo mail account uses your Yahoo ID at your email address (yahoodid@yahoo.com). To help protect yahoo ID when sending and receiving e-mail messages, you can use the Yahoo email alias instead of the primary email address of Yahoo email. Yahoo's email alias is just another Yahoo email address that can be used to hide your main Yahoo Mail account, which contains your Yahoo ID. Therefore, instead of giving your yahoodid@yahoo.com field to receive messages or using it in the From: if you send messages, you would use your yahoоеmailalias@yahoo.com address instead. All messages sent to your Yahoo email alias will be automatically received in your main Yahoo Mail account. You can also make all the messages you want to send from your email alias from your main Yahoo Mail account. In Yahoo Mail, you can only create an email alias using a web browser (not in yahoo mail mobile apps for iOS and Android). If it's created online, you can use the app to receive and view messages sent to an email alias. Navigate to your mail.yahoo.com, and sign in to your account if necessary. In the upper-right corner, select Settings. Select... More settings at the bottom of the sidebar on the right. In the vertical menu on the left, select Mailboxes. Under Email alias, select Add. Enter a name for the new email alias (without @yahoo.com) in the Create new Yahoo Mail address box. You can only include letters, numbers, underscores, and points in an e-mail address. You're also limited to editing your email alias only twice in the next 12 months. Select the Blue Set up button. If the email alias you selected has already been taken or not available, you won't be able to use it. You can try a new one or select a suggestion from the list below that Yahoo will create from your original email alias selection. If your e-mail alias has been successfully created, you'll be prompted to enter the following information: Your name: It appears in the e-mails you sent. Description: Brief description as an additional account. Reply Address: Choose whether you want to receive replies to the email alias or to your primary yahoo email address from messages sent via email alias. Select the Blue Finish button. You can only have one email alias that can both send and receive messages. If you ever want to delete your email alias, select it in settings under Mailboxes, and then select the red Remove alias button. Unlike some other email platforms, Yahoo Mail allows you to send and receive email from your email alias. E-mail aliases usually only act as forwarding email addresses, which means that they are usually only used to receive e-mail. You can send an email using your email alias both from Yahoo Mail online and from the Yahoo Mail mobile app for iOS and Android. On the web, select the Create button in the upper-left corner to create a new e-mail message. In the Yahoo Mail app, tap the colored pencil icon in the lower-right corner. In the From: box, you should see the drop-down arrow icon at the end of your default e-mail address. Tap it to see all your email addresses and select your email alias send your e-mail address. Continue composing your emails as usual, and send it when you're done. The recipient(s) will see your e-mail alias listed as the sender's e-mail address. Do you want to change your email alias to your default shipping address so you don't have to go through the above steps manually each time? On the web, select Settings &gt; ... In More Settings &gt; Mailboxes &gt; Write Email and Under Default Shipping Address, select the drop-down arrow to change your email alias to your new default. Yahoo Mail allows you only to have one main email alias that you can both send and receive messages, but there are two other types of email aliases you can create a certain type of email activity. On the display under the main e-mail alias label in your settings, you can create up to 10 additional email addresses from which you can send messages. Just select Add under Send only email addresses to add email address. When you create or reply to a new message, simply select the drop-down arrow in theL: field to select your only shipping email alias. You can find one-time email addresses in the Send email only settings section. A single-use email address should be used to receive third-party newsletters and will help you maintain control over privacy and spam. You can create up to 500 single-use email addresses from different services that are delivered to your inbox unless you set up filters that are delivered to other folders. If you want to stop receiving messages from a single-use email address, you can easily delete it. Author Irene A. Blake Yahoo's online mail service offers users a wide range of convenient features designed to make email management easy and efficient. Users can archive, organize, download, and delete sent emails at any time, as desired, using one of these features. To understand why you don't see the email you sent, all you need to do is learn a little bit about Yahoo Mail and its settings. Yahoo Mail provides users with the ability to save sent emails to a specific area called the Sent Items folder. Access to this area is through a text link located on the left sidebar of your Yahoo Mail account in the Drafts folder. Normally, if Yahoo doesn't have a problem at the end of it, e-mails won't appear in this area because the Yahoo Mail setting designed to copy them to it is turned off. If you allowed someone to access your account, that person could have turned off the feature because they just didn't want you to read the emails they sent. In addition, someone could have hacked into your account and turned off this feature to prevent your account from being used to bulk send unwanted emails to contacts in your address book and others. Hackers often use other people's email accounts to send e-mail messages containing links malicious software and bad websites. Roll your cursor over your Yahoo Mail account and select Email options to access Settings. If Yahoo doesn't automatically open General Settings, on the left sidebar, under E-mail Options, click General. To turn on save sent e-mail messages under Send messages, click the Save a copy of message box next to Sent Items, and then click Save. If you suspect someone hacked into your Yahoo Mail account, make changes to protect yourself and report a hacker if possible. Click on the gear, select Account information, sign in when prompted, and change your password and security questions immediately. To report malicious spam, select the message, click the down arrow next to Junk E-mail, and then select Report junk e-mail. If you think the sender is the victim of hacking, select Report a hacked account. If the saved sent email feature isn't turned off and you suspect there's an error at the end of Yahoo, contact Yahoo Customer Service (see Resources). The information in this article applies to Yahoo Mail since July 2013. It may differ slightly or significantly from other versions or products. Products.
